SALES ANALYSIS DASHBOARD REPORT

A visual analysis of sales, orders, freight, products, employees and customers

Prepared by

Harinika

Dashboard platform: Microsoft Power BI

Project Report

Prepared from the dashboard screenshots supplied for this report.

1. Executive Summary

This report reviews a Power BI sales dashboard that brings together key business measures and visualisations. The dashboard presents headline sales and freight indicators, monthly order trends, sales by product category, orders by employee, customer counts by country, and a product-level table.

The displayed figures indicate total sales of approximately 1.27 million, 809 total orders, 51,317 units sold, and total freight of approximately 63.96 thousand. The dashboard can help users identify leading categories, compare employee order volumes, track monthly changes, and explore country and product performance.

2. Key Performance Indicators (KPIs)

Metric	Displayed value	What it indicates
Total Sales	1.27M	Overall sales value in the selected data.
Total Orders	809	Number of orders represented in the dashboard.
Total Quantity Sold	About 51K (table total: 51,317)	Total units sold across products.
Total Freight	63.96K	Freight/shipping cost total.
Average Freight	79.05	Average freight value per relevant record/order, as defined in the model.
Number of Customers	91	Customer count shown by the KPI card.

Note: Values are transcribed from the screenshots. The KPI card rounds total sales to 1.27M, while the product table shows 1,265,793.04. The quantity card is shortened to 51K; the table total shows 51,317.

3. Analysis of Dashboard Visuals

3.1 Sales by Product Category

The category column chart compares total sales across product categories. Beverages appear to have the highest sales, followed by Dairy Products. Confections and Meat & Poultry form the next group, while Seafood, Condiments, Produce, and Grains & Cereals appear lower in the chart. This comparison helps management understand which categories contribute most to revenue and where further product-level investigation may be useful.

3.2 Total Orders by Month

The monthly line chart shows order volume rising to a local high around March, followed by a sharp decline in May and June. Orders recover from July onward, with a modest increase near the end of the year. The low point around May–June may be worth checking against promotions, stock availability, seasonality, or data completeness before drawing conclusions.

3.3 Total Orders by Employee

The employee bar chart ranks order volume by employee. Margaret Peacock has the longest visible bar, followed by Janet Leverling and Nancy Davolio. Laura Callahan and the remaining visible employees have lower order counts. This visual can support workload comparison, performance discussions, and follow-up analysis; order count alone should not be treated as a complete measure of employee performance.

4. Customer and Product Details

4.1 Number of Customers by Country

The country bar chart shows the USA as the largest customer-count contributor among the displayed countries. France and Germany follow, then Brazil and the UK. Mexico and Spain appear next, while the remaining countries show smaller counts. This suggests that the customer base is concentrated in a few countries in the visible selection. Country-level revenue and profitability would be useful additional measures.

4.2 Product-Level Table

The table lists product name, category, total sales, and total quantity sold. It enables comparison between product revenue and unit volume. For example, products can be reviewed to see whether high sales value comes from a large quantity sold or a higher value per unit. The visible table total is 12,65,793.04 in sales and 51,317 in quantity sold.

5. Dashboard Screenshots

The following screenshots are included as supporting evidence for the observations above.

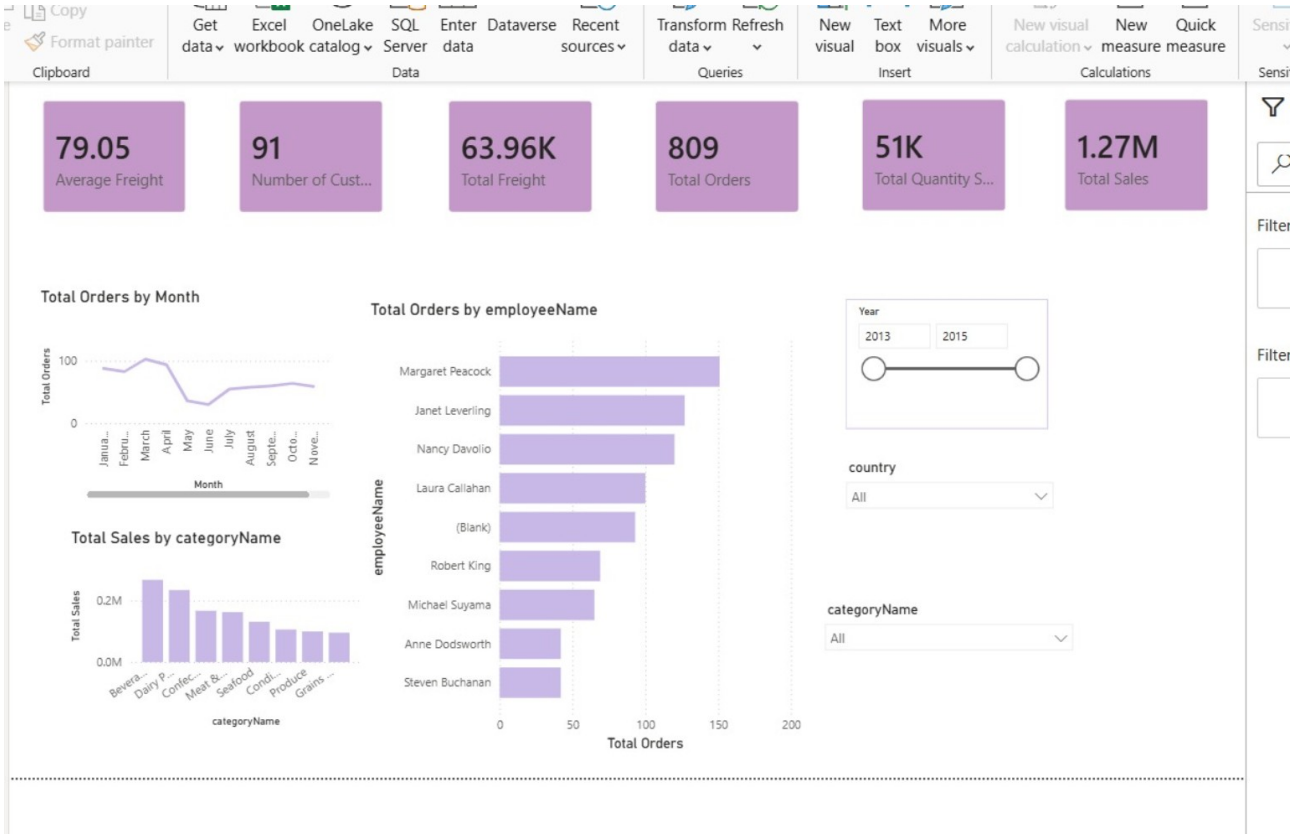

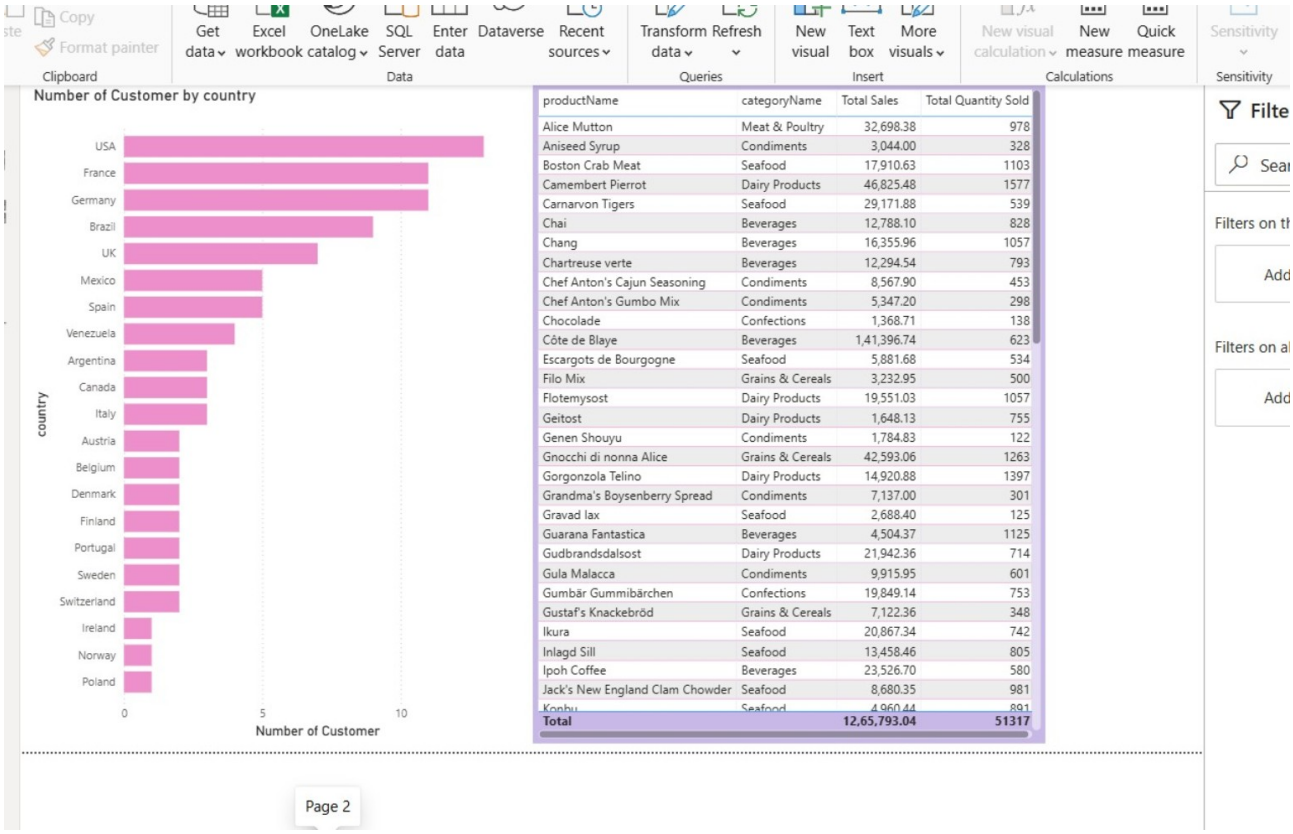

Figure 1. KPI cards, monthly order trend, employee order comparison, category sales, and filters.

productName	categoryName	Total Sales	Total Quantity Sold
Alice Mutton	Meat & Poultry	32,698.38	978
Aniseed Syrup	Condiments	3,044.00	328
Boston Crab Meat	Seafood	17,910.63	1103
Camembert Pierrot	Dairy Products	46,825.48	1577
Carnarvon Tigers	Seafood	29,171.88	539
Chai	Beverages	12,788.10	828
Chang	Beverages	16,355.96	1057
Chartreuse verte	Beverages	12,294.54	793
Chef Anton's Cajun Seasoning	Condiments	8,567.90	453
Chef Anton's Gumbo Mix	Condiments	5,347.20	298
Chocolade	Confections	1,368.71	138
Côte de Blaye	Beverages	1,41,396.74	623
Escargots de Bourgogne	Seafood	5,881.68	534
Filo Mix	Grains & Cereals	3,232.95	500
Flotemysost	Dairy Products	19,551.03	1057
Geitost	Dairy Products	1,648.13	755
Genen Shouyu	Condiments	1,784.83	122
Gnocchi di nonna Alice	Grains & Cereals	42,593.06	1263
Gorgonzola Telino	Dairy Products	14,920.88	1397
Grandma's Boysenberry Spread	Condiments	7,137.00	301
Gravad lax	Seafood	2,688.40	125
Guarana Fantastica	Beverages	4,504.37	1125
Gudbrandsdalsost	Dairy Products	21,942.36	714
Gula Malacca	Condiments	9,915.95	601
Gumbär Gummibärchen	Confections	19,849.14	753
Gustaf's Knackebröd	Grains & Cereals	7,122.36	348
Ikura	Seafood	20,867.34	742
Inlagd Sill	Seafood	13,458.46	805
Ipoh Coffee	Beverages	23,526.70	580
Jack's New England Clam Chowder	Seafood	8,680.35	981
Konbu	Seafood	4,960.44	891
Total		**12,65,793.04**	**51317**

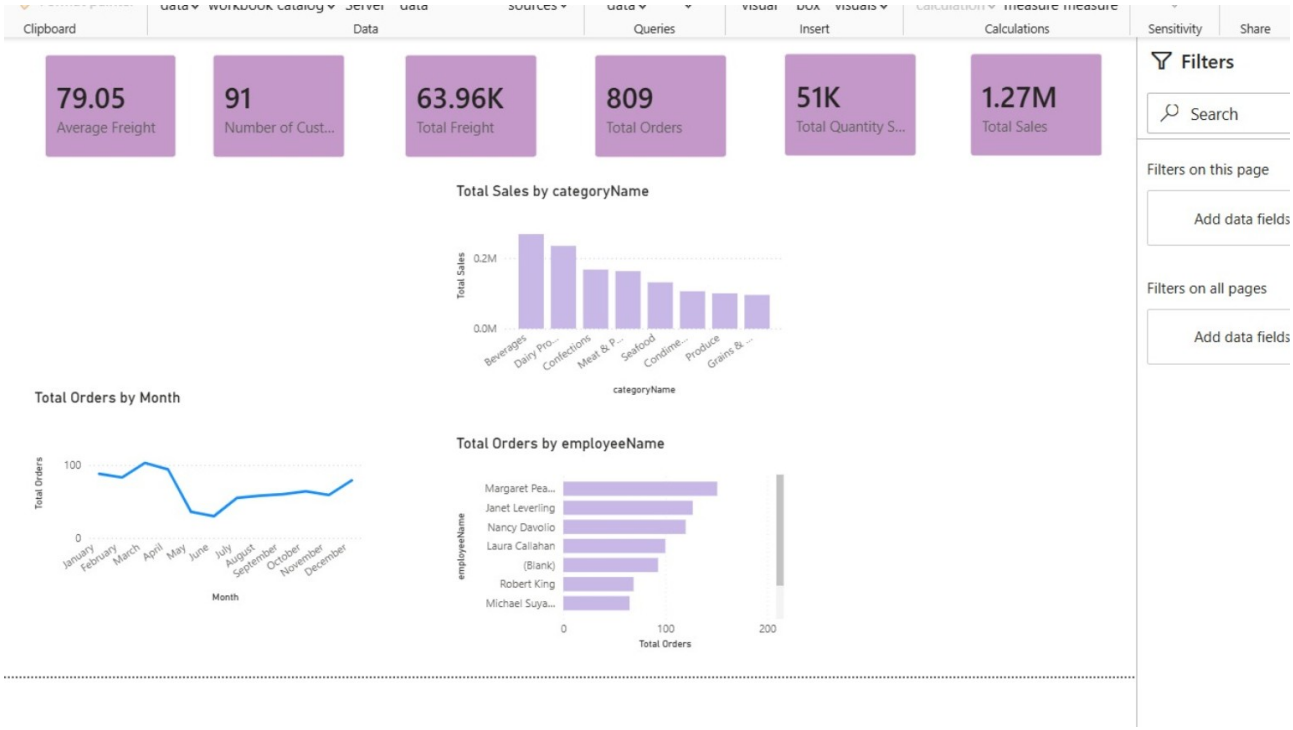

Figure 4. Additional view of the main dashboard visuals.

6. Findings and Recommendations

Main findings

• Total sales are approximately 1.27M, supported by 809 orders and 51,317 units sold.
• Beverages and Dairy Products are the strongest visible sales categories.
• Monthly order volume drops sharply around May and June before recovering.
• Margaret Peacock has the highest visible order count among the employees shown.
• The USA has the highest visible customer count by country.

Recommendations

1. Investigate the May–June order decline by checking stock levels, marketing activity, seasonality, and data quality.
2. Review the best-selling categories and products to understand their margins, not just their sales totals.
3. Compare employee order volume with sales value, customer satisfaction, and workload before making performance decisions.
4. Explore country-level sales and profit to identify opportunities beyond customer count alone.
5. Use the Year, Country, and Category filters to compare specific periods and segments consistently.

7. Conclusion

The Power BI dashboard provides a compact overview of sales activity and allows users to examine performance from several angles. Its KPI cards provide a quick summary, while the charts and product table support deeper comparisons. The most useful next step is to investigate the monthly order dip and combine sales figures with profit, discount, and customer-retention measures for stronger business decisions.

Scope and limitation: This report is based only on the supplied screenshots. Some chart labels are shortened in the images, and the underlying dataset and measure definitions were not provided. Accordingly, observations are descriptive and should be validated against the source Power BI report before operational decisions are made.
